

Get the right combination for securing your online accounts.

Keep Your Login Information Secure.

80% of security incidents are due to weak passwords.¹ IDShield Vault offers next-generation software that's built just for you.

- Generates strong, unique passwords for your accounts
- Stores your passwords using military-grade encryption
- Offers secure auto-backup

Save Time.

From banking and bill-paying to social media and more, the average person has 27 online accounts.² IDShield Vault makes password management quick and easy.

- Takes the hassle out of managing multiple passwords
- Auto-fills login information for you
- Syncs across all your devices

FYI: It's Better Than Browsers For Password Management

Using a browser to store login info can put you at risk if:

- Others use your device
- Your device is lost/stolen
- You fail to erase stored data before getting rid of your device
- You get a virus or malware that can steal stored info from your browser

IDShield Vault reduces these risks with military-grade encryption and an easy-to-use browser app that requires a login to activate the auto-fill feature.

IDShield Vault is included with an IDShield membership at no additional cost.
